

1091ADMR / 1291ADMR Spacesaver®

Electric Dead Bolt Locks with Mechanical Release

The **Spacesaver®**, first designed and patented by SDC, is a fundamental innovation in electric locking technology for access control applications.

FEATURES

STAINLESS STEEL BOLT

Greater security is provided by the 0.625" diameter stainless steel bolt. The bolt rotates freely, making attempts to tamper or cut extremely difficult.

SPECIFICATION GRADE SOLENOID

All Spacesaver® lock solenoids are manufactured by SDC to precision specifications. SDC solenoids are capable of superior overall performance in both force and longevity, providing years of service compared to commercial grade solenoids.

MECHANICAL RELEASE FUNCTION

When used with a mortise key cylinder (not included), the key cylinder is used to manually override the solenoid.

FIELD ADJUSTABLE AUTO-RELOCK SWITCH

The automatic relock switch keeps the bolt retracted while the door is open. The door depresses the ball switch assembly on closure, causing the bolt to project automatically, locking the door. In addition, the ball switch assembly is bidirectional, permitting the locks to be used on swinging and sliding doors.

Fig. 2

The auto relock assembly is field adjustable to compensate for wide door gap. (See Figure 1 & 2 above)

INSTALLATION

SDC Spacesaver® ADMR locks may be mounted in the side jamb or door lock stile.

The stainless steel bolt projects at right angles to the lock mechanism, allowing installation of Spacesaver® locks, by means of a simple cutout, in virtually any standard 1.75" frame, or in most door lock stiles. With the entire lock concealed, aesthetic acceptability is complete, security is greater and installation in old or new construction is fast, easy and economical.
