Exit Check®
DELAYED EGRESS LOCKS

With verbal instruction, alternating tone, countdown display and highly visible multi-color signal device to provide pedestrian & patient safety, theft protection and to alert facility security.

FOR WANDERING PATIENTS, INFANT ABDUCTION AND PATIENT TRACKING SYSTEMS

The SDC 1511S Exit Check® Delayed Egress Lock with EA100 Exit Annunciator™ restricts movement of wandering patients in Senior Assisted Living, Psychiatric, and Drug Rehab Facilities and guards against infant abduction in Hospital Nurseries. Integrates with the SDC/Code Alert Elopement Solution™ for added control in Long Term Care environments.

HOW YOUR CUSTOMER BENEFITS:

- Maintains Fire & Life Safety Code Compliance
- Verbal Annunciation & Visual Display Indicator
- Anti-Tailgate Feature
- Emergency Release & Remote Release Inputs
- Remote Access Control & REX Inputs
- Standard 1650lbs Holding Force
- Single or Tandem Door Applications

WHAT YOU NEED TO KNOW:

Typically used on exit doors, when unauthorized egress is initiated in the locked mode, the SDC Exit Check® delays egress through the door for 15 or 30 seconds. Meanwhile, the person exiting must wait while personnel or security respond. The door unlocks after 15 seconds have elapsed, permitting egress. A signal from the fire life safety system will release the lock for uninhibited egress in an emergency. 30 second delay available where approved.

The Exit Check® provides a clear warning for the safety of persons without prior knowledge of door operation including the blind and hearing impaired. When activation exceeds 1 second, an irreversible process begins that will unlock the door in 14 seconds. The voice message, tone and countdown annunciation continues. Exit Check® complies with today's building and fire life safety codes and is also available in a Tandem model to accommodate pairs of doors.
