Retrofit Electric Latch Retraction PoE Kits

SDC's QuietDuo™ IP100 series retrofit electric latch retraction PoE kits enable electric access control and dogging of panic and fire rated mechanical exit devices. When energized the motor retracts the exit device latch and pulls the pushpad into the dogged (depressed) position enabling momentary or sustained push and pull operation of the door. The latch retraction mechanism may be activated by an access control, remote control device or building automation system. No door sequencer required for a pair of manual doors. The exit device always provides uninhibited egress.

IP100 series kits bring all of SDC's electric latch retraction features to power over ethernet (PoE). The use of a motorized electric latch retraction devices provide several advantages over solenoids including lower current draw, quieter operation and greater durability over time.

IP100 models are one unit completely housed within the rail of the device behind the access cover, whereas IP100-EM models are two piece space saver units, intended to gain up to one inch in spacing within the device, placing the controller board externally to accommodate smaller field cut devices for smaller openings or where space is limited within the rail.
