

WPT WIRELESS POWER & DATA TRANSFER DEVICE

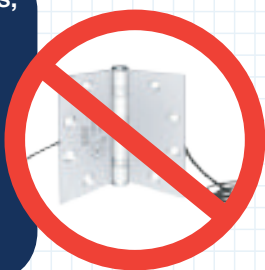

For Electrified Cylindrical and Mortise Locksets

- » Perfect solution for **hollow metal and wood doors** without core drilling the door
- » Retrofit capable with optional Drill Jig Assembly

- » Special **RF technology** sends energy wirelessly across the door gap
- » Transfer of latchbolt monitoring, REX or data signals
- » Works well with steel doors, too

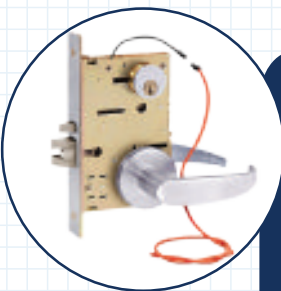

- » Robust - no power transfer loops, exposed wires or moving parts to break
- » Installs on leading edge of door and frame
- » Ideal for doors with narrow lite or full glass window kits

- » Use **radio frequency (RF)** transmitter and receiver to send energy wirelessly across the door gap
- » RF technology not limited by positioning for effective wireless transfer unlike Induction technology

- » More tolerance - **up to 7mm door gap** - for dealing with door sag or misalignment
- » Retrofits are easier, less time consuming

- » For failsafe electrified locksets - **SDC Z7252 Cylindrical Lockset** or **SDC Z7852/82 Series Mortise Lockset Hybrids**
- » For powering, monitoring, controlling or communicating with other electrified door hardware as well

- » **UL 1034** Burglary-Resistant Electric Locking Mechanisms
- » **UL 10C** for Fire-Rated Door Assemblies

Complete Access & Egress System Solutions
